

Execution Context, Call stack

Javascript Execution Context

$\boxed{xy} \rightarrow \text{Global El.}$
 \uparrow this

brausen → würden

node num \rightarrow $\{ \}$ black red $\{ \}$

⇒ JavaScript is single threaded, इसके अंदर
हर चीज एक process होती है।

EC. \rightarrow Global Execution Context
 \rightarrow Functional Execution Context.
 \rightarrow Eval Execution Context (Mozilla)
 \rightarrow (property of Global object).

How code runs

11 → Memory Creation Phase. { allocation of memory }

→ Execution phase

Steps:-

① Global Execution

this (pseudocode) ←

② Memory creation phase

val 1 → undefined
val 2 → undefined
addNum → definition
result1 → undefined
result2 → undefined

→ first cycle, always errors

```
1 let val 1 = 10
2 let val 2 = 5
3 function addNum(num1, num2) {
4   let total = num1 + num2
5   return total
6 }
7 let result1 = addNum(10, 5)
8 let result2 = addNum(10, 2)
```

③ Execution phase :-

val 1 ← 10 } upto line 6
val 2 ← 5

addNum →

result1 = 15
